### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the closest prior art is to Nordson Application Bulletin "Cotton Swab Manufacturing" (hereinafter NAB) and Zimmer (US 4943451). NAB teaches a method of applying adhesive to a first and second ends of a rod shaped member while the member is conveyed in a machine direction with the longitudinal axis of the member extending transverse to the machine direction, where the adhesive is applied from a nozzle discharge passage to a rotating member. See Page 1 and Figure 1. Zimmer teaches an application device and method where liquid discharges from a slot nozzle onto a substrate. The nozzle device is provided with a surface acting as an application surface, where the substrate and application surface maintain contact downstream of the discharge passage to distribute the discharged liquid on the substrate. See figure 1 and column 5, lines 10-68. However, neither reference, alone or in combination teaches or suggests the features of the claims as now required. Neither reference provides both rotating the rod while conveying and also maintaining contact between the rotating first end and the first adhesive application surface downstream of the first discharge passage while conveying the rod to distribute the discharged adhesive around the first end as is now required by independent claim 1. Furthermore, the art of record, alone or in combination, does not teach or suggest the claimed discharge of adhesive through a plurality of passages at least generally aligned with the grooves as required by claim 4 or the claimed

transverse movement of the rod shaped member from the conveying position to the adhesive application position as required by claim 5.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
